AGRODYNE RESOURCES

Proprietary Organic Crop-Response Systems

VELO represents Agrodyne's proprietary organic platform — built to support stronger crop performance through the interaction of carbon, minerals, biology, and signaling in a low-volume, field-practical system.

Designed for organic.  
Built for *response*.

## WHY VELO

The fruit gets the credit.  
The system **earns it.**

Strong organic programs are won below the label line — in the root zone, in mineral function, in biological activity, and in how the crop responds under real field conditions.

**VELO** is not just an organic input; it is Agrodyne's proprietary organic crop-response family, built around carbon, minerals, biology, and signaling.

### **Carbon Support**

Builds a stronger working zone around the crop.

### **Mineral Function**

Supports plant-response functions tied to trace availability.

### **Biological Relevance**

Supports a more active and responsive soil-plant interface.

### **Agrodyne Signaling**

Proprietary four-part support for stronger field response.

Organic programs need more than compliance.  
**They need performance.**
